MyNotes User Documentation

Welcome to MyNotes!
MyNotes is a simple web application that lets you create, view, and manage your personal notes. This guide will help you understand how to use the main features of the app.

1. Registering a New Account

To start using MyNotes, you first need to create an account.
Go to the Register page. You will be asked to choose a username and a password.

- Your username must contain only letters and be at least 3 characters long.
- Your password must be at least 6 characters and can include letters, numbers, or symbols.

If your username is already taken, you will need to choose a different one.

2. Logging In

After registering, go to the Login page.
Enter your username and password to access your notes.
If your credentials are correct, you will be redirected to your personal notes page.

3. Viewing Your Notes

Once you're logged in, you'll see a list of all your saved notes.
Each note shows the title and the creation date in a simple format like: 08.06.2025 19:30.
Clicking on a note will open the full details of that note, including the content and exact date.

4. Creating a New Note

To add a new note, click the "Add New Note" link on the notes page.
You will see a form with two fields:
- Title – the name of your note
- Content – the main text or message of your note

After filling in both fields, click Save.
You will be redirected back to the notes list where your new note will now appear.

5. Deleting a Note

If you want to remove a note, open that note and click the "Delete" button.
You will be asked to confirm the deletion. Once confirmed, the note will be permanently removed from your account.

6. Logging Out

To end your session, click the "Log Out" link in the top-right corner.
This will log you out and return you to the login page.

7. Notes Are Private

All notes are connected to your username.
You can only see, create, or delete notes that belong to your account.
Other users cannot see your notes.

Final Notes

MyNotes is designed to be clean, fast, and easy to use.
If you make a mistake while registering or logging in, you'll see a simple error message telling you what went wrong.
Make sure to choose a password that you'll remember, as there is currently no password recovery option.
